

NAMAN JAIN

Founder, SealRep · CTO, AMG Dynamics, The Goldsmith AI and VerifyID · Founder, Horizon Beam

hi@namanbuilt.com · +91 84465 66043 · namanbuilt.com · linkedin.com/in/naman-jain-hub · India, remote

Developer and founder with 10+ years of experience. I build AI products and the software businesses run on, from the first commit to production. Robotics at 8, code at 9, a paying client at 10. I work remotely with teams in the US and Europe.

EXPERIENCE

SealRep

India, remote

Founder

Jun 2026 to now

- My own product, built solo and not launched yet: five AI agents that find buyers on email, LinkedIn, X and Reddit and draft every message in the sender's voice. Nothing is sent until a person approves it.
- The API, the app, the agents and the site, from the first commit. It also tracks how ChatGPT, Perplexity and Gemini answer buyers' questions.

AMG Dynamics

Mumbai, remote

Chief Technology Officer

Aug 2026 to now

Technology Partner

Oct 2024 to Jul 2026

- Lead the technology across AMG's products and client builds, from architecture to deploys, for jewellers in New York, Germany and Asia.
- Wrote Jewelitt, AMG's WebGL jewellery viewer, and the wedding band builder on it that generates every band from parameters. Jewelitt runs the 3D configurator in Trauringspezialisten's live shop.
- Wrote JewelPrep, a Rhino plugin that turns a production CAD file into a render ready model, and built the configurators AMG showed at GJEPC in January 2026.
- Building the catalogue, order and design platform A.Jaffe in New York is moving onto as it leaves Microsoft Dynamics 365.

The Goldsmith AI

Mumbai, remote

Chief Technology Officer

Aug 2025 to now

- Built AMG Dynamics' AI design platform for jewellers on my own, and lead its engineering.
- It takes a jeweller from a sketch, a photo or an idea to designs, product photos, video and 3D models, and plugs into their own tools through a partner API.

VerifyID

Denmark, remote

Chief Technology Officer

Aug 2024 to now

- CTO from the first commit. I built the platform this Danish identity company runs on, and I run its technology day to day.
- Age and identity checks with MitID and BankID inside webshops: the Shopify app with the check inside Shopify checkout, and the WooCommerce, WordPress, PrestaShop, Wix and Magento plugins.
- The merchant platform and its dashboard, billing, the REST API and its docs, TaxBridge for DAC7 reporting and the KYC flows.
- VerifyID was named Identity Week Europe Start-up of the Year 2026.

Horizon Beam

India, remote

Founder

Dec 2016 to now

- My software studio: me, plus freelancers I bring in when a project needs them. Small projects from December 2016, full time since 2021.
- Web and mobile apps, SaaS, ERPs and CRMs, Shopify and Magento stores, 3D for the web and AI automation, for companies in India, the US and Europe.
- Agencies in India and the US outsource builds to the studio and sell them under their own name.

EARLIER

CTO, ibubbles

Feb 2026 to Apr 2026

It did \$698k in 43 days before we shut it down.

Consultant, Nexdigm

May 2025 to Jun 2025 · Pune

Owned the architecture and the technical decisions.

Principal Engineer, Seller Suspension

Feb 2024 to Apr 2024 · New York based, remote

A New York based firm that gets suspended Amazon seller accounts reinstated. Moved its operations from spreadsheets to a database and automated its daily manual work.

SELECTED WORK

Trauringspezialisten · A ring shop rebuilt around its 3D configurator

Took a German wedding ring chain's unfinished Magento shop from a staging server to live. The configurator's catalogue moved out of Google Sheets into Magento, the media onto S3 and CloudFront in Frankfurt, and the branches kept selling over the counter through it.

VerifyID · MitID and BankID age checks, inside the shops people already run

The platform behind VerifyID's age and identity checks: the shop plugins and the Shopify app, MitID and BankID, the merchant dashboard, billing, and the API and docs.

Social Rise Studio · The software behind millions of Snapchat conversations

An influencer marketing company whose business ran on conversations. I reverse engineered Snapchat's private API, built the bots that did the talking and a phone farm run by AI, and the console that ran 10,000+ Snapchat and 5,000+ Instagram accounts at once.

The Scientific & General Agencies · An ERP where an invoice can't disagree with itself

Sales, dispatch, GST invoicing, purchasing with quality checks, inventory, and a double entry ledger with a Tally export.

Aurethia Education · An exam portal that runs two businesses on one question bank

Past papers by topic with the mark scheme beside every question, test series, and logins for students, parents, teachers and the institute.

JewelPrep · From a production CAD file to a render ready ring

Sorts a ring's production file into metal, prongs, stones, supports and cutters, shows the designer a dry run, then cleans the metal and saves a separate render file the way each manufacturer's profile asks.

SKILLS

Leading the technology	Running a company's technology day to day as its CTO: the architecture, the code, hosting, deploys, staged rollouts and fixes.
AI products and agents	AI agents, MCP servers, Claude API, OpenAI API, RAG with pgvector
3D and CAD for jewellery	three.js, WebGL, Rhino plugins, GLB, 3DM and STL
Identity checks and payments	Stripe, Razorpay, Cashfree, REST
Commerce	Shopify apps, themes and checkout, Magento with Hyvä, WooCommerce and WordPress, PrestaShop
ERPs and CRMs	Custom ERPs and CRMs, Worksuite, Next.js, MongoDB
Apps and SaaS	React, Next.js, Electron, Chrome extensions, Expo and React Native
Languages	TypeScript, JavaScript, Python, PHP, SQL, HTML and CSS
Data	MongoDB, PostgreSQL with pgvector, Redis, Amazon S3, Drizzle
Cloud	AWS, Google Cloud Run, DigitalOcean, Vercel, Netlify, PythonAnywhere
